THE BIRD-SHAPED FINIAL ON ISLAMIC ROYAL PARASOLS: A GHAZNAVID OR FATIMID INNOVATION?

Valentina Laviola - University of Naples “L’Orientale”

This paper aims at investigating when and why the bird-shaped finial made its appearance on Islamic parasols through the analysis of written sources and miniature paintings. Evidence attest to the trans-regional and diachronic use of the parasol as a royal insignia whose meaning and value grew wider to symbolise the seat of government, was it the royal tent, palace or throne.

Keywords: parasol; Islamic royal insignia; Iran; Ghaznavids; Fatimids

1. THE LONG-LASTING TRADITION OF THE PARASOL

The parasol, a device to provide shadow repairing from the sun (or snow), is alternatively referred to as mīzalla, shamsa⁴ or shamsiya in the Arabic-speaking context,⁵ and chatr⁶ in the Persian-speaking areas. It is attested as a royal insignia in almost every Islamic dynasty, but the Islamic period was not at all its starting point. In fact, the history of the parasol is far more ancient. The device has been in use throughout a very long period extending from Antiquity to the Modern Age, and in different cultural areas.

Evidence come from Egypt,⁴ Assyria, Achaemenid and Sasanian Persia,⁵ where the parasol is usually held by an attendant standing behind the figure of the king as an attribute of royalty;⁶ a further spread concerned Asia from China⁷ to the west.⁸ Though it majorly spread in the Eastern lands, the parasol (ζκιάδειον) was known in Late Archaic and Classical Athens as well. Greece seems to be the only territory where it was not reserved to men.⁹ The depiction of a parasol-bearer attending someone other than a

---

¹ In some Islamic contexts such as the Abbasid and Fatimid courts, the term shamsa might indicate a crown suspended above the caliph’s head, not to be confused with the parasol (see Halm 1995; 1997).
³ The Persian term chatr is borrowed from the Sanskrit, thus attesting a very ancient origin of the device and alluding to its use in the Indian context. Monneret de Villard (1968, 270) reports that, before the Hellenism exerted its influence on the Indian art, Buddha was represented through symbols: among these, there were the parasol and the throne. From the term chatr derive the variations shitr or jitr, demonstrating that the oriental origin of the device was still perceived (see Korn 2012, 149). In addition, the term tayyāra indicated the sunshade placed above the throne of Rustam in Ṭabarī (d. 923; see Friedmann 1992, 82).
⁴ The parasol was known in Egypt since the 3rd millennium BCE (McDonald 1999; cf. also Miller 1992, 93).
⁵ See Muscarella 2013, 817-824, with related bibliography. About the parasol portrayed in the Sasanian reliefs of Tāq-i Bustān, see Ghirshman 1962, fig. 237.
⁷ A figure wearing a tiara and carrying a parasol (chattra) is depicted on a stone pedestal from the Indian Museum of Calcutta (inv. no. A 25157 B.G. 51): the scene probably refers to a divine episode (see Bénisti 1981-1982, 212, fig. 3). A fragmentary parasol of Han production has been found; both royal and devotional uses are attested in the Buddhist context, and recalled by the stupas as well (for both information see Andrews 1993, 192).
⁸ Two parasols are portrayed in a religious scene on a coin struck by Caracalla (r. 211-217; see Andrews 1993, 192).
⁹ The parasol is depicted as part of the feminine equipment in 4th-century funerary iconography (a maid holds the parasol above the seated lady; see Miller 1992, 92), 6th-century vases (Miller 1992, 95) and in the divine
king in Late Archaic Lycia might be explained as a custom resulted from the cultural influence of Persia.\textsuperscript{10}

There is no reference to the parasol under the Umayyads; conversely, its use is attested in the Umayyad caliphate of al-Andalus\textsuperscript{11} and under the Normans\textsuperscript{12} that is to say in the western extremities of the Islamic and Islamic influenced territories.

2. **The Royal Parasol and Its Bird-Shaped Finial in the Iranian Lands During the Islamic Period**

The presence of a bird-shaped finial on top of royal parasols is confirmed for the first time by historical sources during the Ghaznavid period. Fakhr-i Mudabbir (d. 1236) in his Ādāb al-ḥārb waʾl-shajāʿa writes about the finial topping Sultan Masʿūd III’s parasol:

«In the year 503 [1109] the Sulṭān-i Karīm ʿAlāʾud-Dawla Masʿūd son of Raḍī Ibrāhīm (May God purify their dust!) marched toward Bust. An exquisite, precious and unique pearl fell down from the beak of the falcon surmounting the Sultan’s umbrella.»\textsuperscript{13}

This passage provides an information that let the reader to imagine the parasol’s finial as a true jewel. It is reminiscent of the Sasanian crown worn by Hormsūz II (r. 303-309) that featured not only the typical spread wings but a complete bird of prey, portrayed by the profile, holding in its beak a drop-shaped element (possibly a pearl).\textsuperscript{14} Thus, the presence of a jewelled falcon on top of the royal insignia - attested also under Ibrāhīm (r. 1059-1099) -\textsuperscript{15} may have been inspired to the ancient Iranian tradition.\textsuperscript{16}

\textsuperscript{10} Miller 1992, 94.
\textsuperscript{12} Byzantines and Fatimids represented the royal prototypes Roger II of Sicily (r. 1130-1154) looked at. Depictions in the Cappella Palatina in Palermo show a set of insignia of sovereignty: a variety of headgear, the parasol, which always matched the fabric of the caliph’s costume, a sceptre, sword and shield (see Tolar 2011, 32). A parasol (al-mizalla) would have been sent to the Norman kings as a gift from the Fatimid caliph (see Flood - Necipoğlu eds. 2017, 379).
\textsuperscript{13} Shafi 1938, 200 (emphasis added).
\textsuperscript{14} See Fontana 2012, 95; cf. Erdmann 1951, 99, fn. 47, and also fn. 38, fig. 18; Göbl 1971, pl. 5:14. See also Halm 1995, 131.
\textsuperscript{15} Bosworth 1963, 280, fn. 23.
\textsuperscript{16} Such a continuity of customs can be traced in the use of a jewelled, suspended crown in vogue among the Sasanian kings as well as under the Abbasid and Fatimid caliphs. See above, fn. 1. Moreover, on the drachms
The court-poet Sayyid Ḥasan (d. 1161) confirms that the parasols of Masʿūd III and his son Bahram Shāh (r. 1117-1157) featured a falcon on their top:

«Blessed be the top of his throne that brings the firmament closer
Fortunate be the falcon of his parasol that raises the world below.»

Miniatures produced from the mid-14th century onward show episodes related to the Ghaznavid history which can be held as a demonstration of the custom. The bird-shaped finial appears two times in a Shāhnāma’s miniature (Iran, 1446) on top of both the throne where Sultan Maḥmūd (r. 998-1030) is seated and the wide parasol above him (fig. 1).

A further detail concerning the colour of the Ghaznavid parasol comes from the Tārīkh-i Masʿūdi by Bayhaqī (d. 1077), who reports an episode occurred in the aftermath of the defeat of Dandānqān (1040), when the Sultan had to flee to Ghazni leaving everything behind:

«Before the Amir left Reiḥ-e Karvān, a trusty messenger arrived from the castellan Bu ʿAli. He brought two black ceremonial parasols, a black banner and short spears, all placed in a black satin brocade bag, an elephant litter and a mule litter, together with other pieces of equipment, since all these insignia of royalty had been lost (i.e. in the flight from the battlefield).»

A Safavid miniature could confirm the choice of a dark colour: it illustrates a convivial meeting of Firdowsī with three among the Ghaznavid court’s poets, ʿUnṣurī, Farrukhī and ʿAsjudī; on the background, there is a man carrying a closed black parasol (fig. 2).

Episodes mentioning the parasol without providing any specific detail about its finial abound. The chatr-dār was one of the highest tasks a ghulām could attain to, along with the standard bearer, the master of the wardrobe, and the armour-bearer; and still before the

issued by the Persian king Phraates IV (r. 40-3 BCE) was depicted a falcon holding a diadem in its beak (see Daryaeae - Malekzadeh 2018, 247).

The miniature belongs to a Shāhnāma’s manuscript started under Shāh Ismāʿīl (r. 1501-1524) and completed in 1535 under Shāh Ṭahmāsp (r. 1524-1576), thus known as the “Shāhnāma of Shāh Ṭahmāsp”. It is currently preserved in Toronto, Aga Khan Museum, Ms. AKM 156, fol. 7r. The isolated figure standing on the right and dressed in yellow might represent Sultan Maḥmūd; he seems to wear a falconer’s glove. The poet Masʿūd-ı Saʿd (d. 1121-2) mentions the black canopy of Bahram Shāh as well (see Khan 1949, 82-83).

Khan 1949, 83.
I wish to thank Viola Allegranzi for translating from Persian.

The majority of miniatures mentioned as examples in this paper are drawn from this manuscript and the Rashīd al-Dīn’s Jamiʿ al-Tawārīkh, Herat, 1430 ca., Bibliothèque nationale de France, Supplément persan 1113, since they are among the oldest ones attesting bird-shaped finials and fully accessible online.

Bosworth 2011, II, 338 (emphasis added).

The defeat of Dandānqān cost the Ghaznavids the loss of Khurasan in favour of the Seljuqs.

Bosworth 1963, 105. On the occurrence of the parasol already under the Samanids, cf. below and fn. 28.
prince Mawdūd ascended the throne, his ghulāms were entrusted to carry the ceremonial parasol.24

With regard to the warfare context, the already mentioned Ādāb al-ḥarb waʾl-shajā’a (late 12th-early 13th century) by Fakhr-i Mudabbir narrates the fight between Bahāram Shāh and Muḥammad-i Bā Ḥalīm, who revolted against him:

«The drums were beaten and the army ranged itself in battel order. The ungrateful Moḥammad-i Bā Ḥalīm spread his umbrella and delivered an attack in the centre.»25

During the attack led to Lahore, the «chatar» (umbrella) is the insignia held above «the infidel pretender» riding a horse on the battlefield.26 Both these passages attest that the parasol was used as an official signal to set the battle starting and that its value of royal insignia was recognised as such beyond the Islamic field. Moreover, during the reign of Masʿūd III, carrying off the enemy’s standard or chatr on the battlefield was regarded among the actions that might earn a special reward in the plunder’s share.27

The chatr must have entered the Ghaznavid court along with the administrative and royal protocols acquired from the Samanids, among those it is attested in the 10th century.28 The custom spread in the Iranian lands so that, in the aftermath of 1092, the chatr had become such a highly symbolic device in the Seljuq protocol that a son of Nizām al-Mulk gave Sultan Berkyaruq (r. 1092-1105) «the sarāparda and the royal umbrella which are royal insignia (ālāt-i saltanat az sarāparda wa chatr)» in the attempt of obtaining the vizierate.29

The Seljuq prince Qāwurd (d. 1073) tried to act as an independent ruler by adopting «the royal insignia of a parasol (chatr), stamping on documents a tughra or official emblem […] and assuming the regal titles».30

Among the episodes most frequently illustrated in miniatures there is the meeting of the Seljuq Sanjar (r. 1097-1118) with an old woman: the Sultan is always portrayed mounting a horse and shadowed by a large parasol, which is sometimes topped by a golden bird-shaped finial (fig. 3).31 The story is drawn from the first poem of Nizāmī’s Khamsa, the Makhzan

26 Shafi 1938, 214.
27 Bosworth 1963, 126. The loss of insignia corresponded to a loss of power: «the capture, appropriation, or usurpation of a royal standard or parasol could mean defeat or rebellion». To protect the royal insignia was a point of honour on the battlefield; otherwise, the king would be deprived of the visible signs of his authority (see Flood 2009, 122).
29 See Durand-Guédy 2013, 168.
30 Bosworth 1968, 88.
31 For other miniatures illustrating this episode and featuring parasols fitted with bird finials, see, for instance, other paintings from manuscripts of Nizāmī’s Khamsa: Herat, 15th century, Staatsbibliothek zu Berlin, Diez A fol. 7, fol. 19r (cf. SBB website); Iran, 1529, Los Angeles County Museum of Art, the Edwin Binney, 3rd, Collection of Turkish Art, Ms. M.85.237.16 (cf. LACM website); Tabriz, 1539-43, London, British Library, Ms. Or. 2265, fol. 18r (cf. Sims - Marshak - Grube 2002, fig. 127). The episode is portrayed in other miniatures, which do not include the bird-shaped finial (cf. Minissale 2000, 61, 107 and followings.).
al-asmusrār (the Treasury of Secrets) but, curiously, Niżāmī makes no mention of the parasol in his text, while many miniatures include this detail. A possible explanation could be found in a contamination derived from another episode narrated in Niżāmī’s Diwān about the Prophet Muḥammad and the [Turk] king of the Kaʿba, who appears under a black parasol:

«Look at the Sultan of Ka’ba, on the throne of the seven lands
Green silk on his body, a black parasol (čatr-i siyāh) on his head /
He, sitting on the royal throne, cross-legged like the kings
The compass of his ring circular like the sky /
It’s a beloved (Turk) with an Arab body, due to snatching hearts
On his white face, there is a black mole of ambergris».

As seen above, black was the colour of the Ghaznavid insignia. Since the Seljuqs as much as the Ghaznavids were Sultans of Turkic origin, the black parasol may have been inserted in miniatures to connote the Turkic lineage of Sultan Sanjar. It would thus represent a figurative link between the two dynasties.

32 See Dārāb 1945, 167-169.
33 Cf. above, fn. 31.
34 Nafīsī 1959, 232.
35 The first and third lines are taken from Lornejad - Doostzadeh 2012, 116, with few corrections by the author. The second line has been translated by Viola Allegranzi.
36 The parasol’s colour was probably a communicating detail. Ayyubids and Mamluks used yellow parasols (see Andrews 1993, 193). References in the Persian literature provide images of great impact: the golden parasol, chaṭr-i zarrīn, was intended as a metaphor of the sun, as well as the chaṭr-i simīn, as a metaphor of the full moon with its silvery colour, and the chaṭr-i ʿambarīn means the darkness of night. Kings of Persian culture were certainly well aware of such poetical imageries and probably considered them in choosing their parasols’ fabric (see Sims 1992, 78). The Seljuq Tughril Beg (r. 1037-1063) is known to have entered Nishapur under a red parasol after his conquest. Red tents and standards were in use among the Qarakhanids as well (see Andrews 1993, 193; Durand-Guédy 2013, 171). Among the Qarakhanids a black silk, curved parasol was part of the ‘alāmāt al-ḥarb, emblems of war on the battlefield and the single emblem of rank attributed to the chief minister, while the orange one was reserved for the sovereign and his family. The Khitan parasol was red with a gilt finial. The Seljuq of Rum Ghiyath al-Dīn Kay Khusraws II (r. 1237-1246) changed the colour from black to blue to mark his opposition against the Abbasids. Chingis Khān had a yellow and red parasol; red was that of the Ilkhan. Tīmūr (r. 1370-1405) is portrayed in a miniature entering Samarqand under a parasol (from a copy of Sharaf al-Dīn All Yazdi’s Zafrānāma, Shiraz, 1434-36 ca., Washington D.C., Freer Gallery of Art, inv. no. 48.18, cf. Gray 1961, 97) of dark red brocade decorated with small, gold motifs. A Safavid parasol with arabesque brocade, sometimes a fringe, maybe a gilded bird on top, is depicted in painted outdoor scenes (for all these informations see Andrews 1993, 193). Nevertheless, the parasols portrayed in miniatures not always respect the historical colours.
According to Ibn al-Athīr (d. 1233), the Seljuq Sulaymān Shāh (the nephew of Malik Shāh, r. 1159-1160) entered Baghdad under a parasol to pay visit to the Abbasid caliph.\textsuperscript{37} The same historian reports that the Ghurid ʿAlāʾl-dīn Ḥusayn Jahānsūz (r. 1141-1169) adopted some of the royal features in use among the Ghaznavids and the Seljuqs, such as the title of al-sulṭān al-muʿaẓẓam and the ceremonial parasol (chatr).\textsuperscript{38}

Later on, the Ilkhanid Jalāl al-Dīn (r. 1412) surrounded the encampment of a rebellious relative, who recognised him as the Sultan thanks to the parasol held over his head.\textsuperscript{39}

During the Timurid and Safavid periods many miniatures illustrating scenes drawn from history and literature, related to the Iranian epic as to coeval events, were produced. Some of them show parasols provided with a bird-shaped finial.\textsuperscript{40}

3. THE ROYAL PARASOL AND ITS BIRD-SHAPED FINIAL IN ISLAMIC EGYPT

The use of the parasol is testified in Fatimid Egypt, but the presence of a bird-shaped finial on its top is attested only during the reign of the Fatimids’ successors. Moreover, while the use of the parasol in the Iranian Islamic lands is attested by both written sources and images, its tradition in the Islamic Mediterranean emerges merely by historical sources.

As well as under the Ghaznavids, at the Fatimids carrying the parasol corresponded to a high rank. In the 11\textsuperscript{th} century, though Slavs became less prominent in the army they nevertheless continued to be the favoured ones for such task. The šāhīb al-mizalla occupied the fourth level in the administrative-military hierarchy after the vizier, the head chamberlain or šāhīb al-bāh, and the commander-in-chief or isfahsālār.\textsuperscript{41}

Gold seems to have been the favourite colour for parasols: in 990, al-ʿAẓīz (r. 975-996) rode to the Azhar Mosque under a mizālla mudhahhaba,\textsuperscript{42} while the parasol used by al-Ẓāhir (r. 1021-1036) in 1024 had heavy gold fringes.\textsuperscript{43}

Numerous references relate the role of the parasol to the royal lineage. The amir ʿAbd Allāh, son of the caliph al-Muʿizz (r. 953-975) returned to Cairo in 973-4 after the successful fight against the Qaramatians. He made his entrance shaded by a parasol (mizalla), which was «ordinarily a caliphal prerogative». Al-Muʿizz received him sitting under a dome (qubba) over the gate of the palace.\textsuperscript{44} The amir is granted with a great honour as a recognition of his military merit; still the caliph stands higher than anyone else does.

\textsuperscript{44} Sanders 1994, 22.
The qubba - a fixed structure located in an upper position - answers to the mizalla granted to his son, so that the hierarchic order is maintained through its visible symbols. Moreover, when al-Mu’izz died the event was only revealed as his successor al-ʿAzīz rode in procession to the mosque for the ʿid al-nahr under the parasol and then pronounced the khutba in his own name: thus, the parasol was such strong a symbol to equalise the Friday sermon, traditionally considered the way through which the ruler demonstrates his power along with the coinage (sikka).45

Another episode attests that the parasol was carried over al-ʿAzīz’s heir apparent Manṣūr during the Ramadān procession in 993. On that occasion, even the caliph rode without its shade: the impression made on the public must have been great, the caliph renounced to his own insignia in favour of his successor, so to show him officially as the next ruler.46

A further interesting aspect emerges from the sources: the parasol was only employed in outdoor settings during processions for festivities and celebrations and it was never carried within the palace walls.47 By the analysis of the sources, the same can be said for the Ghaznavids; and after all, this was the custom in the Antiquity.48 According to Sanders, this choice in the Fatimid context can be explained by the identification of the parasol with the palace itself.49 The parasol thus becomes a sort of synopsis of the royal palace that can follow the king when he is outdoor. The relation between the qubba and the parasol highlighted in the episode about the caliph al-Mu’izz50 is revealing: the two highest ranks in the reign are marked by two elements (qubba and parasol) that become interchangeable.

Most references to the Fatimid court concern official ceremonies of various kind, and in particular those linked to the Nile occurring twice a year: perfuming the Nilometer and cutting the canal when the Nile reached sixteen cubits. The latter occurred in 1122: «the caliph emerged from the Gold Gate […] The parasol was unfurled and the caliph [al-Āmir] began the procession while the Qurʾan was being recited».51

Ibn al-Ṭuwayr (d. 1220) describes the preparation that preceded the celebration of the New Year.52 The royal insignia were usually kept in the palace treasuries under the responsibility of high officials; the parasol was selected together with the caliph’s outfit so that the elements match one another.53 «After the caliph mounted his horse […] the three

---

47 «The parasol had been opened to the caliph’s right as he exited from the Festival Gate» proceeding to the musalla (see Sanders 1994, 77).
48 Assyrian, Achaemenid and Sasanian kings portrayed under a parasol invariably appear in outdoor scenes. See above and fn. 5, and cf. also below and fn. 61.
51 Ibn al-Ṭuwayr does not specify the caliph’s name. Taking into account his life’s extent, it should be one of the last four Fatimid caliphs: al-Ḥāfiẓ (r. 1130-1149), al-Ẓāfir (r. 1149-1154), al-Fāʾiz (r. 1154-1160), or al-ʿĀḍiḍ (r. 1160-1171).
52 In his list of the royal instruments («On Royal Instruments Especially for Grand Processions») al-Qalqashandi (d. 1418) confirms that the parasol (mizalla) always matched the fabric of the caliph’s costume (see Sanders 1994, 25, who nevertheless denounces that al-Qalqashandi’s list reflects Mamluk categories which appear anachronistic related to the Fatimids).
main insignia, the parasol, sword, and inkstand, were brought out and given to their porters. The porter unfurled the parasol with the assistance of four Ṣaqlabī eunuchs, and he placed it firmly in the stirrup of his horse, holding the pole with a bar over his head.54 This passage describes the high care devoted to the parasol and proves that it was as important as better-known insignia. To this respect, Sanders stresses: «all things associated with the caliph were accorded the same reverence as the caliph himself».55

The presence of a bird-shaped finial is attested only under the Ayyubids and Mamluks by al-Qalqashandi who includes the parasol in his chapter entitled «On the protocols and instruments of royalty»:

«called al-jitr, described as a yellow silk dome brocaded with gold that has a gold-plated silver bird at its apex. It is carried above the sultan’s head during [the processions of] the two feasts. This item was carried over from the Fatimid era».56

He also reports that the Mamluk dār al-ṭirāz produced parasols topped by a bird-shaped jewel. The device, shaped on a Fatimid prototype, became known as al-qubba waʾl-ṭayr, the dome and the bird.57

The custom spread southward: in his travel’s report Ibn Baṭṭūta (d. 1368-9) attests the persistence of the parasol in the African region during the mid-14th century as a reminiscence of the Fatimid protocol.58 He also stresses in further occasions the jewelled nature of the parasol.59

In 1514, according to Ibn Iyās, the Mamluk Sultan Qānsūh al-Ghūrī (r. 1501-1516) replaced the bird that had traditionally topped the qubba or royal parasol with a gold crescent, the symbol of Islam.60 The importance of this passage is twofold: first, it confirms that the term qubba was used to indicate the parasol as well; second, it provides us with the date until which the parasol’s finial was still bird-shaped.

54 Sanders 1994, 88-90.
56 El-Toudy - Abdelhamid eds. 2017, 239 (emphasis added). As already mentioned, to the state of our knowledge such a heritage from the Fatimids is not attested by written sources.
57 Holt 1993, 192.
58 He reports in particular about the sultan of Maqashaw (Mogadishu; see Gibb ed. 1959, 377). Ibn Baṭṭūta guided a Moroccan embassy to the empire of Mali and describes the local Sultan holding audience seating under «a parasol, that is to say, something like a silken cupola […] On top of it is a gold bird the size of a falcon» (see Gibb - Beckham eds. 1994, 959). In Morocco, where the orientalist painter Eugène Delacroix (d. 1863) portrayed the ruler under a royal parasol (see Dakhlia 2005, fig. 1), still in the early 1980s high state awards counted a gold star plaque (to be worn over the shoulder from right to left) bearing on the second side «the representation of the royal parasol, red in colours» (Pellat 1995, 62).
60 Alhamzah 2009, 41, 132. A crescent, hitāl-i rāyat, was already in use on top of the Ghaznavid banner’s pennon (see Khan 1949, 81-83; Bosworth 1977, 99).
4. THE BIRD-SHAPED FINIAL AND ITS MEANING

Numerous evidences, coming from cultural contexts earlier than the Islamic period, show parasols provided with a vegetal or geometric finial or without any finial. In the stone reliefs of Sargon II (r. 721-705 BCE) at Khorsabad the parasol is topped by a vegetal finial that can be identified with a lotus; in Persepolis’ reliefs (in the Council Hall, the palaces of Darius and Xerxes, in Xerxes Haram) a fruit resembling a pomegranate probably with a good wishing role tops the parasol. It was a symbol of fertility by virtue of its thousand red ‘seeds’, thus largely represented in royal contexts.

The introduction of an ornithomorphic finial must have occurred in the Islamic period, but what led sovereigns to shift from a vegetal symbol to a zoomorphic one is still to be understood. Most reliable sources place the introduction of the bird-shaped finial under the Ghaznavids. As far as we know, there is no coeval evidence from Egypt. References to this kind of finial date back to a later period when, according to the opinion of al-Qalqashandi, it was possibly adopted imitating a Fatimid prototype.

It is not easy to infer the bird species from miniatures, but whenever the historical sources are specific in this regard, a falcon is mentioned. Taming falcons for hunting was regarded among the divertissements worthy of a king, as attested also in the Shāhnāma, but the symbolic meaning of such practise goes far beyond the pleasures of court. As written sources such as the Avesta (sacred Zoroastrian hymns) and the Bundahishn (the Book of Primal Creation, a Middle Persian encyclopaedic text) attest, in the Zoroastrian understanding of good and evil the falcon was a heavenly creation, entitled to hunt down and eliminate the evil creatures. The task of the (Persian) king was pretty much the same, so that martial arts and hunting skills had a similar role among the king’s occupations. Moreover, since the falcon was associated with Verethraghna, the deity of offensive war and victory, and xwarrah, the heavenly fortune and glory, it became strictly linked to the Persian ideology of kingship. Even after the fall of the Sasanians and the decline of Zoroastrianism, the falcon enjoyed the position of royal companion in the framework of hunting. The Persian poet and mathematician ʿUmar Khayyām, in his Nawrūznāma (1267-1270)

62 The finial could also be identified with the amalaka, a fruit employed as a finial on Hindu temples (see Rosser-Owen 1999, fn. 2).
63 On the pomegranate in the ancient Near East, see Nigro - Spagnoli 2018.
64 The Turkish term lachïn for falcon was also adopted as a personal name, according to the Turkic custom.
65 Bosworth (1977, 61) mentions the amir ʿAḍūd al-Dīn Lāchīn Khāzin as the addressee of a poem by ʿUthmān Muktārī.
66 Cf. above and fn. 56.
68 Daryaei - Malekzadeh 2018, 245.
70 One of Verethraghna’s avatars is a falcon, which possibly became a symbol of good luck on coins, crowns and seals (Daryaei - Malekzadeh 2018, 246).
71 The glory, xwarrah, is described flying to or away from kings as a falcon (Daryaei - Malekzadeh 2018, 246-247).
72 The falcon connection with the Sasanian crown has already been pointed out (see above, fn. 14).
Valentina Laviola

The parasol finial is often referred to as a jewel, probably because of its shiny appearance, because it crowned a device already distinguished by prised fabrics, and maybe because of refined manufacture. It was likely made of metal, and in particular precious metals as suggested by al-Qalqashandī who writes of a «gold-plaited silver bird». Lastly, miniatures always show it as a golden finial. The presence of a pearl revealed by the Ghaznavid sources opens the chance that the bird was embellished by the addition of precious stones or inlay. The Persian traveller Nāṣir-i Khusraw (d. 1088) reports that during the Nile procession of al-Mustanṣir in 1047 the «parasol itself was covered with precious stones and pearls».

Zoomorphic, often bird-shaped, finials are largely employed on Islamic metalwork especially on top of handles, lids and spouts, sometimes with an apotropaic role. Unfortunately, relating fragmentary preserved items to a specific artefact is all but easy. Furthermore, it is likely that once a parasol was damaged or deteriorated its finial was melted down. How the finials were fixed on top of the parasol can be tentatively inferred by observing the miniatures. Usually, the bird stands on a globular or spade-shaped pedestal. A couple of bronze artefacts might provide hypothetical examples similar to such finials. The first, ascribed to the 10th-century Iran, features a conical and flat-based pedestal; the second and far later one (17th-18th century) is inlaid with silver and presents a concave, sloping base possibly fitting a domed shape.

---

75 According to Ibn Hishām al-Lakhmī (12th century), the term ṣaqr indicates any bird of prey employed in falconry, thus both eagles and falcons (see Martínez Enamorado 2011, 160-161).
76 Tamari (1996, 31 and fn. 46) recalls the role embodied by the falcon and the eagle as well for the Umayyad dynasty, both in Damascus and Cordova.
77 Tamari 1996, 113-114, fn. 68.
78 See above and fn. 56.
79 See above and fn. 13.
80 Cf. fn. 59.
81 A pre-Islamic finial found at Gordion, approximately dated to the 8th century BCE and attributed to a parasol, was wooden made (see Simpson 2014).
82 The artefact is mentioned by Allan (1976, II, 834, no. 4) and Rosen-Ayalon (1972, 180, fig. 33), who published the picture.
83 The item was auctioned: https://www.livemaster.com/item/2466592_islamic-bronze-bird-finial-with-silver-inlay (last access: 19/06/2019).
5. CONTEXTS OF EMPLOY AND SOCIO-POLITICAL IMPLICATIONS

The high number of miniatures and written sources including the parasol offer the chance to observe a wide range of situations and contexts this insignia was employed in. The parasol acted as a sign: it signalled the presence and position of the king on the field and distinguished his figure from the rest of his retinue, since the parasol was reserved to the king, not to his family members (with due exceptions). Beyond celebrative and military occasions, sometimes the parasol appears in funerary contexts.

Miniatures show either historical kings or literary heroes shaded by the parasol, which always marks the prominent figure in the scene thus becoming an «expanded royal symbol» that embodies different values; such freedom of employ can be observed in late Islamic representations, while on ancient stone reliefs its role was much more restricted.

The role of the parasol as a royal insignia deserves further analyses; in fact, the landscape should be enlarged to include other elements typical of the royal ‘equipment’ and regarded to embody the seat of the government: the palace, the tent and the throne. The relationship between them and the parasol is closer than it could seem.

As already stated, in the Fatimid context «the parasol clearly symbolised the palace». The expression al-qubba wa l-fayr names the parasol, by virtue of its domed shape, through the term usually adopted for domed structures covering throne halls and entrance gates in Islamic civil architecture. Unfortunately, royal palaces built by the Ayyubids and Mamluks in Cairo survive insufficiently; just few information are provided by the sources. Still, it can be assumed that the parasol was intended as a portable qubba on behalf of the actual qubba, the royal palace. The link between parasol and qubba is observed in miniatures on an iconographic ground through the addition of the falcon above both of them. Some of these miniatures show sloping domes on top of buildings. It could be hypothesised that they were made of fabric, as tents covering a terrace. In this case, the parasol...
link with the parasol would be even closer. A fabric-made tent would have covered the personage appearing inside a building as the parasol covers him outdoor. The falcon represents the trait d’union between the two devices.

A Safavid miniature consents to observe a morphological evolution: the parasol (without the bird-shaped finial) on a step forward toward the shape of an architectonic qubba according to the shape in use under the Safavids (fig. 5).

The term qubba could be used to indicate a dome-shaped tent as well. Thus, another conceptual link between royal devices is established. The tent is the absolute portable structure but also the closest one to the role of the royal palace, being the king residence and his audience hall. Some Muslim sultans are known to have preferred spending much of their time in nomadic tents. Seljuqs, for instance, were not sedentary rulers; even the long-reigning Malik Shāh (r. 1072-1092), along with his activity as a patron of new buildings, lived also in tents (sarāparda). This custom consented to move from one place to another according to the change of seasons and to keep close relations with the army at any time, thus ensuring the power, and with the Turkmens as well. The value of the royal tent as the official seat of power was fully acknowledged. In the Seljuq court, the parasol is often associated to the tent - sometimes referred to as the red qubba - as a symbol of kingship.

A further link between royal symbols concerns the parasol and the throne. The number of miniatures showing a falcon on top of the throne is revealing; some of them include it on both the throne and the parasol as the already mentioned miniature portraying the Ghaznavid Maḥmūd (fig. 1). Probably more numerous are the miniatures illustrating only the throne topped by a bird finial: among these it can be mentioned one from a Timurid manuscript of Rashīd al-Dīn’s Jāmī’ al-Tawārīkh (Herat, 1430) showing the throne of the Mongol Chingis Khān surmounted by a falcon, thus attesting the persistence of the custom during the Timurid period (fig. 4).

Finally, Maḥmūd al-Kāshgāri in his famous Dīwān lughāt al-turk (1072) provides the Khāqāni term for the parasol, chowāch, which interestingly denotes the crown - or the vault of heaven - as well.

The domed shape - of either the qubba or parasol - ideally crowns the

Sackler Gallery, Smithsonian Institution, Inv. no. S1986.160, cf. Casby 1999, fig. 4. A bronze beaker (Iran, dated to the early 12th millennium BCE) shows a throne featuring an upward pointing protome in form of bird head (New York, Metropolitan Museum of Art, inv. no. 54.5; cf. Muscarella 1974, fig. 4). From the Elymaean complex in Tang-i Sarvak (eastern Khuzistan province, 1st-3rd centuries) comes a relief showing a bird-shaped footed throne (see von Gail 1971, fig. 1). These ancient prototypes may have influenced the choice of a bird-shaped finial during the Islamic period.
king and reproduces the vault of heaven over his head.\textsuperscript{95} When such a device is carried above the king the latter is marked as an \textit{axis mundi} between the Earth and the Sky, paralleling the order granted by the ruler to the cosmic one established by God.

6. CONCLUSIVE REMARKS

The fact that no reference to the use of the parasol in the Islamic context predates the Abbasid period might possibly indicate that such a device entered the Islamic royal protocol along with the introduction of Persian customs, given its ancient origin.

As demonstrated above, the parasol was a royal insignia: great attention was paid to the choice of its fabric, often a precious silk, its colour and decorative pattern, usually matching the caliph’s robe. Nothing was left to chance in the Islamic royal protocol, and highly scenographic processions were common especially under the Fatimids.

The addition of a bird-shaped finial on top of the parasol helped enhancing its meaning and it must have been chosen carefully so to convey the right message. The falcon, whose first introduction can be historically retraced to the Ghaznavid period, enjoyed a royal connotation among the birds of prey. The varied contexts of employ indicate it as a flexible and inclusive symbol, proper to convey authority of the king as well as the role of the main character in the story. Evidence in Egypt point to the Mamluk period; still al-Qalqashandi believed that the \textit{al-qubba waʾl-ṭayr} was a Fatimid heritage.\textsuperscript{96}

The inclusion of the bird-shaped finial in so many miniatures attests its communicating strength and its historical persistence through centuries as a trace of the influence exerted by early Islamic rulers on the following dynasties. Miniatures’ painters clearly drew from an iconographic repertoire that necessarily reflected the common awareness.

Since its employ in the crown that rested on the Sasanian kings’ head, the bird of prey alluded to the concepts of glory and victory. The falcon added on top of the Islamic parasol retained the same meaning, being perceived as a mark of royalty enriching the insignia on a decorative as well as symbolic ground.\textsuperscript{97} The expression «in the service of the parasol (\textit{chatr}) of the imperial stirrup», attested under the Seljuqs, equalises the parasol to kingship itself.\textsuperscript{98} It demonstrates the physical transfer of authority and representativeness from the ruler to one of his insignia.\textsuperscript{99} In Flood’s words, «as signs of sovereignty, inalienable objects often refer metonymically or synecdochically to the body politic […] by the very act of possessing such sign, their possessor becomes what they embody».

To conclude, a modern stone relief in Chashma ʿAli, near Rayy, where the Qajar Fatḥ ʿAlī Shāh (r. 1797-1834) appears in two scenes can be mentioned. In the first one, he is seated on his throne; in the second scene, on the right, he stands with a falcon on his

forearm while an attendant holds a parasol behind him (fig. 6). The falcon, which used to top the parasol in earlier Islamic representations, comes back to its original function of hunter and its original position on the arm of the king. The intention of the two scenes seems to portray the king in his official duty and then in a more informal situation; still in the latter the parasol and the falcon are present, even if not together as in the traditional iconography analysed above.
